

Product Requirements Document (PRD): Vinci Automation (Lesson Calendar)

1. Vision & Core Philosophy

- **The Goal:** Easy & readable calendar interface which shows all lessons scheduled along with their statuses.
- **Core Principles:**
 - **Color Coded Statuses:** Vibrant & clear colors show the status of each lesson (based on tutor assignment) for quick status updates for admin.
 - **Clickable Lessons:** Admin can click each lesson on the calendar & it will expand and view specific details for that lesson and some actions (such as assigning tutors manually if needed)

2. User Journey:

- **Context:** Jay wants to check up on lessons today, this week, and this month.
- **The Journey:**
 1. Jay opens up the lesson calendar page and chooses “Day” setting and clicks on the “Today” button.
 2. A view with 2 bars (both colored green) with the time & course name for that lesson appears.
 3. Jay clicks on both to check on who’s teaching & to view additional data for each lesson. A slideout page slides out from the right side and all this data is viewed.
 4. Jay opens up the weekly view, and a similar interface is seen, only with seven distinct sections (each representing a day) marked with the day with a line separating each. He does the same checking for lessons.
 5. Jay opens up the monthly view, and a similar interface is seen, only with 30/31/28 (depending on month) distinct boxes (each representing a day) marked with the date and each box having the same bars with the course name and time of the lesson.

3. Core Functional Requirements

3.1 Easy Status Checking

- **Intuitive Color Coding:**
 - Red: Lessons without a tutor assigned & within a week of the current day.
 - Yellow: Lessons without a tutor assigned & not within a week of the current day.
 - Green: Lessons with a tutor assigned.

3.2 Detailed Lesson View

- **Clear Data View Fields:** The subsection that slides out will have all relevant lesson data easily viewable to admin with the following fields:
 - School
 - Date & Time
 - Assigned tutor (or tutor's)
 - Number of tutors
 - Lesson Income (modifiable for adjustments)
 - Lesson Material Link (modifiable for adjustments)
- **Quick Action Buttons:** Provides admin with 2 button options, "Send Whatsapp New Lesson Assignment" (will be greyed out for lessons with enough tutors accepted) and "Send Material & Reminder to Chosen Tutors" which acts as a reminder and file sharing method for chosen tutors (will be sent at least once automatically, admin has the choice to do it manually again just in case).
- **Read Only for core lesson data:** Schedule is mainly for viewing & not for modifying scheduled lesson fields (to avoid accidental changes) & to reduce potential sources of discrepancies from input changes.

4. Delivery Boundaries

- Read only (mostly) calendar interface with multiple duration settings & clickable lessons to view even more specific lesson data.
